Abstract

Aloe Vera, a cactus-like plant belongs to Asphodelaceae (Liliaceae) family has been used for traditional medical purposes for thousands of years. Aloe Vera derives its name from the Arabic word “Alloeh” which means “shining bitter substance” because of the bitter liquid found in the leaves and Vera which means “true” in Latin. There are over 300 species of aloe, most of which are native to South Africa, Madagascar and Arabia. Aloe leaves can be separated into two basic products: the latex, a bitter yellow liquid beneath the epidermis of the leaf and the gel, a colorless and tasteless substance in the inner part of the leaf. Both of them have many biologically active components, mainly anthraquinones and polysaccharides (the most active is acemannan), which may act alone or in synergy. Application of Aloe vera gel is cosmetic-moisturizers, toothpastes and flavoring compounds or preservative of fresh products and in medicine of humans or animals. Aloe vera gel is an active ingredient in hundreds of skin lotions, sun blocks and cosmetics. Aloe vera seems to treat of wounds, burns, insect stings, and skin inflammation, anti-inflammatory, antiseptic and antimicrobial, anti-tumor, anti- skin protection, anti-diabetic, anti-bacterial, anti-viral, and which are very important for wound healing. Aloe Vera gel helps in activating new hair growth as it increases blood circulation to the scalp. It also provides essential minerals and vitamins.

Keywords: Aloe vera gel, Skin diseases, Medicinal Plant, Wound healing, Anti-inflammatory, pharmacological properties.

INTRODUCTION

Aloe Vera is derived from the tropical cactus of the genus aloe. Aloe Vera derives its name from the Arabic word “Alloeh” which means “shining bitter substance” because of the bitter liquid found in the leaves and Vera which means “true” in Latin [1, 2]. Aloe Vera is Aloe barbadensis miller. It belongs to Asphodelaceae (Liliaceae) family, and is a shrubby or arborescent, perennial, xerophytic, succulent, pea-green color plant. The aloe plant has long (up to 20 inches long and 5 inches wide), triangular, fleshy leaves that have spikes along the edges. The fresh parenchymal gel from the center of the leaf is clear; this part is sometimes dried to form aloe Vera concentrate or diluted with water to create aloe juice products [3].

The sticky latex liquid is derived from the yellowish green pericyclic tubules that line the leaf (rind); this is the part that yields laxative anthraquinones [4]. There are over 300 species of aloe, most of which are native to South Africa, Madagascar and Arabia [5]. The different species have somewhat different concentrations of active ingredients [6]. Aloe Vera is one of the oldest medicinal plants for healthy skin ever known. This plant is often mentioned used in herbal medicines since the beginning of the first century AD [7].

Aloe Vera (AV) gel has been used in the treatment of wounds, burns, insect stings, and skin inflammation, anti-inflammatory, antiseptic and antimicrobial, anti-tumor, anti- skin protection, anti-diabetic, anti-bacterial, anti-viral, and which are very important for wound healing [8, 9]. AV is effective for wound healing through various mechanisms such as maintaining moist wounds, increasing cell migration, increasing collagen production, and reducing inflammation [10].

**Figure 1: Aloe vera plant and Aloe vera gel [11]**

Aloe vera is a stemless or very short-stemmed plant growing to 60–100 centimetres (24–39 inches) tall, spreading by offsets [12]. The leaves are thick and fleshy, green to grey-green, with some varieties showing white flecks on their upper and lower stem surfaces [13]. Aloe vera leaves contain phytochemicals under study for possible bioactivity, such as acetylated mannans, polymannans, anthraquinone C-glycosides, anthrones, and other anthraquinones, such as emodin and various lectins [14]. Aloe vera can lead to skin integrity, moisture retention, erythema reduction, and helps to prevent skin ulcers [15].

Aloe vera to treat wounds such as psoriasis, mouth sores, ulcers, diabetes, herpes, bedsores, and burn wounds [16, 17]. AV is very good at maintaining moisture, tightening, and smoothing the skin [18]. Aloe vera gel is an active ingredient in hundreds of skin lotions, sun blocks and cosmetics [19]. AV gel contains various vitamins such as vitamin B12, vitamin A, other B-group vitamins, vitamin C, vitamin E, folic acid, and 19 of the 20 amino acids needed by the human body [22]. The gel's use in cosmetics has been boosted by claims that it has similar anti-aging effects to vitamin A derivatives [20]. When faced with a minor burn, a fresh leaf can be cut and the gel of the inner leaf applied directly to the burn immediately after the injury [21].

**Chemical composition of Aloe vera gel**

The leaf of A. Vera composed of mainly three layers. Rind is the outer thick layer containing 15–20 cells which synthesizes carbohydrates and proteins. Inside the rind, vascular bundles are present such as xylem and phloem [23].

| Class                        | Compounds                                                                 | Properties                                                        | References |
|------------------------------|---------------------------------------------------------------------------|                                                                  |            |
| Anthraquinones/anthrones     | Aloe-emodin, aloetic-acid, anthranol, barbaloin, isobarbaloin, emodin, ester of cinnamic acid. | Aloe and emodin acts as analgesics, antibiotics and antivirals.    | [23]       |
| Carbohydrates                | Pure mannan, acetylated mannan, acetylated galactan, xylan, cellulose, glucomannan, glucogalactomannan, galactogalacturan, arabinogalactan., galactoglucoarabinan mannan, pectic substance | A glycoprotein with anti allergic properties, called alprogen and novel anti-inflammatory compound. | [24]       |
| Chromones                    | 8-C-glusoly-(2'-O-cinnamoly) -7-O-Methylaloeadiol A,8-C-glucosyl-(S)-aloesol,8-C-glucosyl-7-O methylaloeadiol A, 8-C-glucosyl-7-O-methylaloeadiol, 8-C-glucosyl-noreugenin, isoaloesin D, iso rabat chromone, nealoesin A | The novel anti-inflammatory commands.                              | [25]       |
| Enzymes                      | Alkaline phosphatase, amyrase, brady kinase, carboxy-peptidase, catalase, cyclo-oxidase, lipase, oxidase, cyclo-oxygenase, phosphoenol pyruvate, carboxylase, superoxide dismutase. | Brady kinase helps to reduce excessive inflammation when applied to the skin topically, while others help in the breakdown of sugars and fats | [26]       |
| In-organic compounds         | Calcium, chlorine, chromium, copper, iron, magnesium, manganese, potassium, phosphorous, sodium, Zinc. | They are essential for the proper functioning of various enzymes systems in different metabolic pathways and few are antioxidants. | [27]       |
| Miscellaneous including organic compounds and | Arachidonic acid, Y-linolenic acid, steroids (campestrol-cholesterol, Bsitosterol), triglycerides, salicylic acid | Essential for the proper functioning                              | [22, 24]   |
Aloes are a group of plants belonging to the family Asphodelaceae. They are known for their gel, which is extracted from various species of Aloes. The gel contains a range of compounds with diverse properties, which make it useful in various applications, particularly in skin care. Here is a summary of the main classes of compounds found in Aloes, their properties, and references:

Aloe gel is 99% water with a pH of 4.5 and is a common ingredient in many non-prescription skin salves. The gel contains an emollient polysaccharide, glucomannan. It is a good moisturizer [30].

**Mechanism action of Aloe vera gel [31]**
Pharmacological Properties of Aloe vera gel

Wound Healing properties

The effective components for wound healing may be tannic acid, and a type of polysaccharide. Wound healing is a mechanism of repairing damaged tissues in human body [32]. Mannose-6-phosphate found in the mucilaginous gel of A. Vera is considered to be the active ingredient for wound healing. Aloe vera on wound healing was assessed by collagen thickness and the number of fibroblasts [33]. The number of fibroblasts in the full-thickness defect treated with ozonated Aloe vera oil was higher than that treated with Aloe vera oil only and gentamicin ointment [34]. Ozonated ointment increases reactive oxygen species (ROS) at the wound site acting as a secondary messenger for various immunocytes and nonlymphoid cells involved in the wound repair process and plays a pivotal role in coordinating the recruitment of lymphoid cells to the wound site and effective tissue repair.

Wound healing and preventive effects of Aloe vera to prevent ulcers and enhance the healing process of dermal injuries (e.g., burns, frostbite, skin infections, surgical wounds, inflammation, herpes ulcers, diabetic foot ulcers, pressure sores, and chronic wounds) has been reported [35]. Aloe vera was more effective than petroleum jelly gauze dressing, silver sulfadiazine 1% ointment, and framycetin cream. It reduced the recovery time, prevented infection in the wound area, and prevented redness and itching [36].

Effects on skin exposure to UV and gamma radiation

Aloe Veras support the healing of first to second degree burns and have a protective effect against damage to skin [37, 53]. Aloe vera gel, an antioxidant protein, metallothionein, is generated in the skin which scavenges hydroxyl radicals and prevents suppression of superoxide dismutase and glutathione peroxidase in the skin. It reduces the production and release of skin keratinocyte-derived immunosuppressive cytokines such as interleukin -10 and hence prevents UV-induced suppression of delayed type hypersensitivity [38, 54].

Antibacterial properties

Aloe vera inhibits the growth of some microorganisms like Str. pyogenes, Shigella flexneri, Klebsiella sp., especially against Gram-positive bacteria causing food poisoning or diseases in humans and animals [53].

Anti-oxidant / Antiseptic effect

Aloe vera possesses enormous antioxidant effect. Glutathione peroxidase activity, superoxide dismutase enzymes and a phenolic anti-oxidant were found to be present in Aloe Vera gel, which may be responsible for these anti-oxidant effects [39]. Aloe vera enhances the blood quality, probably by allowing the blood to more effectively transport oxygen and nutrients to the cells of body [40].

Aloe vera contains 6 antiseptic agents: Lupeol, salicylic acid, urea nitrogen, cinnamonic acid, phenols and sulfur. They all have inhibitory action on fungi, bacteria and viruses [41].

Anti - inflammatory action

Inflammation is an innate response of the body against an injury, characterized by swelling, pain, redness and heat, resulting in delay in the healing process [42]. The anti-inflammatory action of Aloe vera gel not only relieves from pain and discomfort, but also accelerates the healing process. The effects observed for acetylated mannan in Aloe gel resembles the anti-inflammatory action of mannose-6-phosphate [40, 43]. Aloe vera also inhibits the cyclooxygenase pathway, reducing the production of prostaglandins, thereby reducing the inflammation. The aqueous and chloroform extracts of Aloe vera were found to have anti oedema effects. Further, they were found to decrease the neutrophil count progressing towards the peritoneal cavity. Aloe vera also showed a great anti-inflammatory potential for the treatment of H. Pylori infection [44].

Anti-acne effect

Acne is the most common disease of skin which causes trouble in adolescent and adult life. Acne vera are very effective against acne and inflammation on any area of skin e.g. it consists of vitamins, minerals and hormones. It is hydrophilic in nature so very effective to use for oily skin [46]. Aloe vera emulgel helped to reduce the flare of acne, contains the olive oil, rose oil and lemon oil also that deeply penetrates into skin and provides cleansing and smoothing effect over the skin [47]. It has also moisturizing property that protects the skin from over dry which is not good for acne prone skin [48]. Olive oil has antioxidant and anti-bacterial property that helpful in fighting against inflammatory cells to reduce inflammation [50]. Rose oil and lemon oil has cleansing action and clears the pores from inflammatory bacteria Propylene glycol, another ingredient in Aloe vera emulgel, used as humectant solvent. It is non-irritant to skin and aids deeply penetration of drug into skin [51, 52].

Moisturizing and anti-aging effect

Aloe vera is currently utilized in manufacturing more than 95 % of the dermatologically valuable products. This is because it possesses implausible moisturizing properties [19]. It improves the ability of skin to hydrate itself and help in removal of dead skin cells that producing collagen and elastin fibers, making the skin more elastic; and less wrinkled, thereby, reversing the degenerative skin changes. It softens the skin, by its cohesive action on superficial
flaking epidermal cells and also by the action of amino acids [41].

**Anti-diabetic effects**

Aloevera gel is well known for reducing the blood sugar level. Aloevera gel (alcohol insoluble residue extract) significantly reduced the fasting blood glucose, hepatic transaminases, plasma and tissue cholesterol, triglycerides [57], free fatty acids and phospholipids and in addition also significantly increased plasma insulin levels. Aloevera extract to reduced blood glucose levels is by enhancing glucose metabolism [58].

**Uses / benefits of Aloe vera gel**

It is used as base material for the production of creams, lotions, soaps, shampoos, facial cleansers and other products. In the pharmaceutical industry, it is used for the manufacturing of topical products such as ointments and gel preparations, as well as in the production of tablets and capsules dried aloevera gel has been successfully used to manufacture directly compressible matrix type tablets.

**CONCLUSION**

Aloevera is a medicinal plant and curing agent for various diseases such as wounds healing, inflammation, cancer, liver diseases, microbial diseases, skin problems cardio vascular disorders, ulcer, free radical related diseases, diabetes, and others. The cultivation of Aloevera has acquired great commercial importance for medicinal products and cosmetics. Aloevera is widely used in food, healthcare, skincare and medical industry as active ingredients for extra therapeutic, health enhance effectives. Aloevera improves skin moisture from the texture of roughness, shines, cracks, and scrapes. Aloevera emulgel formulation due to its anti-inflammatory, anti-acne, anti-oxidant, anti-diabetic non-irritant and deeply penetrating properties helps the skin nourishment to turn into normal position with soothing and emollient effects.
